1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-7, 9-11 and 15 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Amended claim 1 raises the issue of new matter. The **original** specification, including the original claims and drawings, does NOT disclose **ALL** the added language, "a feedback transmission delay line ... summed current (line 21 to the end), i.e., the **original** specification, page 6, complete paragraph, does detail the Fig. 3; however, certain features are NOW claimed do not disclose in the **original** specification, e.g., "at least one output of the at least one feedback transconductance element coupled together at the current summing node for summing the at least one feedback current into the summed current". It is noted that Fig. 3 shows a single transconductance element (21). Therefore, there is **NO** "current summing node" feature.

To overcome the rejection, the claims should be rewritten based on the **original** specification.

2. Claims 1-7, 9-11 and 15 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

As per independent claim 1, "a transimpedence ... output voltage signal;" (lines 19-20) should be -- a transimpedence ... output voltage signal;-- .

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tan V. Mai whose telephone number is (571) 272-3726. The examiner can normally be reached on Mon-Wed and Fri from 9:30am to 2:30pm.
